

Title : ISOLATED INVOLVEMENT OF CERVICAL LYMPH NODES IN CASTLEMAN'S DISEASE IN A YOUNG PATIENT: A RARE PRESENTATION

Author Name : Madhu S. D

CO Author Name : Parvathi M

Publication : Research Paper

Department : Department of Radio diagnosis

Asbtract :

Isolated cervical nodal involvement of Castleman's disease is very rare, accounting for 6% of all cases. Of the two histopathological variants of Castleman's disease, the hyaline-vascular type is more common as seen in our patient and carries a better prognosis than the plasma cell type.
